

## POPs Compliance Declaration

Persistent organic pollutants (POPs) are organic substances that persist in the environment, accumulate in living organisms and pose a risk to our health and the environment. They can be transported by air, water or migratory species across international borders, reaching regions where they have never been produced or used.

The Stockholm Convention Persistent Organic Pollutants Review Committee (POPRC) reviews and updates the Stockholm Convention's list of persistent organic pollutants (POPs) which details the substances that are eliminated, restricted or subject to limitations. Fisk Alloy, Inc. monitors this list in conjunction with the requirements of Regulation (EU) 2019/1021 on persistent organic pollutants and The Persistent Organic Pollutants Regulations 2007.

Based on information as reported by our suppliers, Fisk Alloy, Inc. declares that processes and materials used or produced during the manufacture of its products:

- do not intentionally contain POPs;
- do not involve laboratory-scale research using POPs;
- do not use equipment containing POPs;
- do not exceed the limits defined for unintentional trace contaminants of POPs.

**Important Information:** Information provided by Fisk Alloy on its Website or in other communications concerning the substance content of its products represents Fisk's knowledge and belief as of the date that it is provided. Fisk based its knowledge and belief on information provided by third parties and laboratory test results and makes no representation or warranty as to the accuracy of such information. Fisk has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted chemical analysis on all incoming materials. In no event shall Fisk Alloy, Inc. liability arising out of such information exceed the total purchase price of Fisk material sold by Fisk to a Customer on an annual basis.
